

FEMA Region 10 Seismic Mitigation Showcase Guides

Throughout June, FEMA Region 10 will highlight resources, risk reduction community planning and project initiatives, and provide actions for people to get vaccinated to support community resilience.

SEISMIC MITIGATION SHOWCASE GUIDES

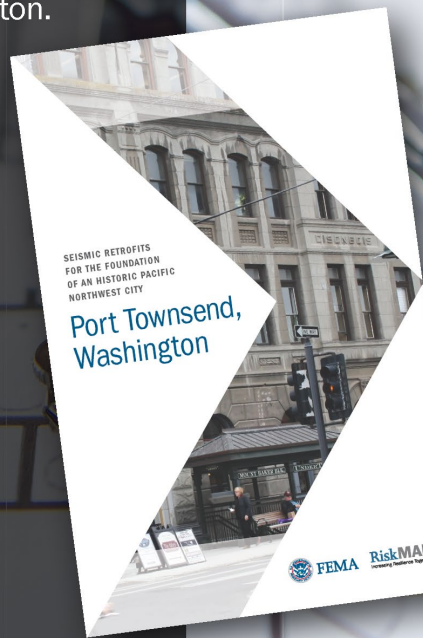

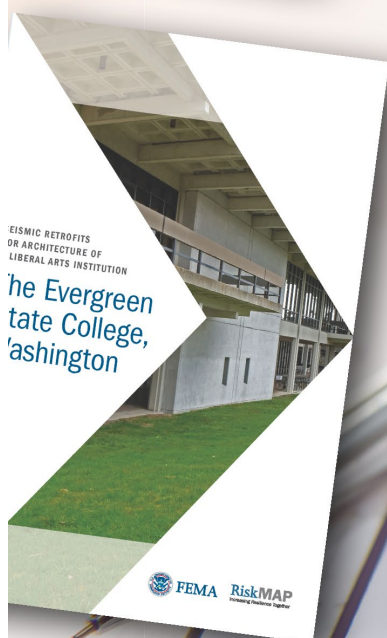

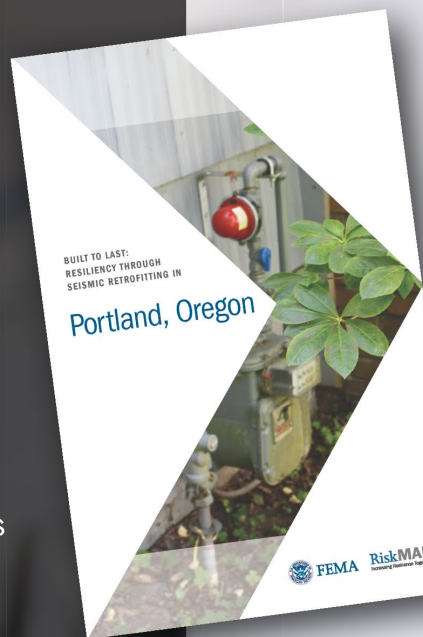

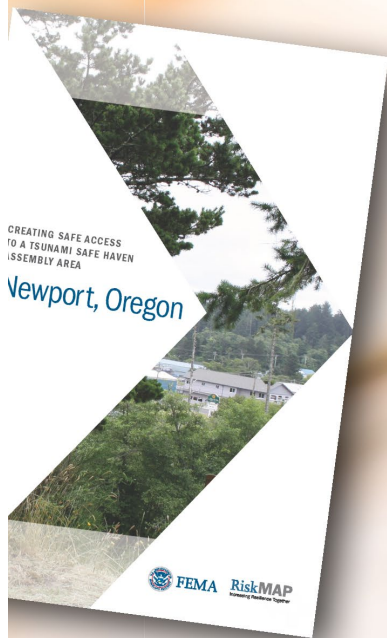

Successful mitigation projects

require more than a funding source. They require key partnerships, engaging the public for support, and local leadership support.

FEMA Region 10 created four guides that highlight challenging, yet successful seismic and tsunami risk reduction projects in the Pacific Northwest. Each guide offers key insights, timelines, and resources to implementing each organization's successful project. Learn about the tsunami safe haven assembly area in Newport and home seismic retrofits in Portland, Oregon, and academic building retrofits at The Evergreen State College and historic downtown retrofits in Port Townsend, Washington.

Information provided in each guide intends to inspire and support other communities that wish to pursue similar mitigation action.
